With the increased integration of computers and Internet into our everyday lives, to protect sensitive and personal data becomes more important and challenging. This course focuses on the design of various biometric systems based on fingerprints, voice, face, hand geometry, palm print, iris, retina, and other modalities. Multi-modal biometric systems that use two or more of the above characteristics are studied. This course also examines biometric system performance and the issues related to the security and privacy aspects of these systems.

#### **Objectives:**

1. Develop authentication mechanisms that use the components of physiological and behavioral biometric systems.
2. Analyse the structure of bio-metrics-based authentication systems.
3. Develop expertise in formulation and development of bio-metrics systems for specific applications.
4. Evaluate and integrate biometric systems in various system wide applications as needed.
5. Analyse and understand the components of different forms of bio-metrics, such as fingerprint, face, gait, keystroke, and so on.

#### **Instructional Design:**

This course is of 40-hour duration which includes theory classes and assignments etc.
